### IO-Link modules for EtherNet/IP

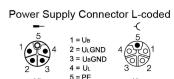

# 8 IO-Link Master Channels ELIP-8IOL-L001

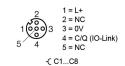

- Ethernet/IP IO-Link Master
- Integrated Ethernet Switch
- Support 100Base-TX
- 2 x M12, 4-pin, D-code, Ethernet Fieldbus connection
- 8 IO-Link Master Channels
- IO\_Link V1.1
- IO-Link Master Port Type Class A
- IO-Link master port M12 A code
- Metal connector with high-strength plastic housing
- Impact and vibration resistance
- Fully potted module electronics
- Protection class IP67

Supply voltage	Model	ELIP-8IOL-L001
Supply current  IO-Link port parameters Number of ports Connectivity inputs Common IO pins Port supply current Port supply current The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A  IO-Link parameters SIO model Not Supported, The 4th hole cannot be used as a normal I/O. IO-Link Pin definition Pin 4 in IOL mode IO-Link specification V1.1 Frame type Support Supports all specified frame types Support Device Maximum 32Bytes Input / 32Bytes Output Transmission rate 4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP Number of communication interface 2 Transmission standard 100Base-TX Auto-negotiation Supported Auto-MDI/MDIX Supported Auto-mDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D-coded, Female Default IP address segment IP address setting function Default subnet mask 255.255.255.0 Communication data format	Supply voltage	24VDC ± 10%
IO-Link port parameters Number of ports Connectivity inputs M12, A-coded, Female Not supported. The second hole needs to be left empty. Port supply current The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A The total of C5C8 does not exceed 4A  IO-Link parameters SIO model Not Supported, The 4th hole cannot be used as a normal I/O. IO-Link Pin definition Pin 4 in IOL mode IO-Link Port type Class A, The second hole needs to be left empty. V1.1 Frame type Support all specified frame types Support Device Maximum 32Bytes Input / 32Bytes Output 4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP Number of communication interface Transmission standard Auto-negotiation Auto-negotiation Supported Auto-megotiation Auto-mBDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D-coded, Female Default IP address segment IP address setting function Default subnet mask 255.255.255.0 Enmunication data format	Operating current	< 200mA
Number of ports Connectivity inputs Common IO pins M12, A-coded, Female Not supported. The second hole needs to be left empty. The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A  IO-Link parameters SIO model Not Supported, The 4th hole cannot be used as a normal I/O. IO-Link Pin definition Pin 4 in IOL mode IO-Link Port type Class A, The second hole needs to be left empty. IO-Link specification V1.1 Frame type Support Bevice Maximum 32Bytes Input / 32Bytes Output Transmission rate 4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP Number of communication interface Transmission standard 100Base-TX Auto-negotiation Auto-MDI/MDIX Supported Auto-MDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D-coded, Female Default IP address segment IP address setting function Default subnet mask 255.255.255.0 Communication data format Binary	Supply current	Recommended >8A
Connectivity inputs Common IO pins Not supported. The second hole needs to be left empty.  Port supply current The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A The total of C5C8 does not exceed 4A  IO—Link parameters SIO model Not Supported,The 4th hole cannot be used as a normal I/O. IO—Link Pin definition Pin 4 in IOL mode IO—Link Port type Class A, The second hole needs to be left empty. V1.1 Frame type Supports all specifical frame types Support Device Maximum 32Bytes Input / 32Bytes Output Transmission rate 4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP Number of communication interface 2 Transmission standard 100Base—TX Auto—negotiation Supported Auto—MDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D—coded, Female Default IP address segment IP address setting function Support DHCP Default subnet mask 255.255.255.0 Enmoty in the current provided by the first the current provided by the first total of C1C4 does not exceed 4A The total of C1C4 does n	IO-Link port parameters	
Common IO pins  Not supported. The second hole needs to be left empty.  The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A  IO-Link parameters SIO model  Not Supported,The 4th hole cannot be used as a normal I/O.  IO-Link Pin definition Pin 4 in IOL mode IO-Link Port type Class A, The second hole needs to be left empty. IO-Link specification V1.1  Frame type Supports all specified frame types Support Device Maximum 32Bytes Input / 32Bytes Output Transmission rate  Ethernet/IP Number of communication interface Transmission standard Auto-negotiation Auto-mgotiation Supported Auto-mgotiation Supported Maximum transmission rate 100Msit/s Connector M12, D-coded, Female Default IP address segment IP address setting function Support DHCP Default subnet mask 255.255.255.0 Empire Auto-medical plans and provided support of the CP Default subnet mask 255.255.255.0 Empire Auto-medical plans and provided support DHCP Default subnet mask 255.255.255.0 Empire Auto-medical plans and provided support DHCP Default subnet mask 255.255.255.0 Empire Auto-medical plans and provided support DHCP Default subnet mask 255.255.255.0 Empire Auto-medical provided support DHCP Default subnet mask Binary	Number of ports	8 (C1C8)
Port supply current  The maximum is 2A, which is the current provided by the first hole to the device. The total of C1C4 does not exceed 4A The total of C5C8 does not exceed 4A The total of C5C8 does not exceed 4A  IO-Link parameters  SIO model  Not Supported,The 4th hole cannot be used as a normal I/O. Support Device Maximum 32Bytes Input / 32Bytes Output Transmission rate 4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP Number of communication interface 2 Transmission standard 100Base—TX Auto—negotiation Supported Auto—MDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D—coded, Female Default IP address segment 192.168.0.* IP address setting function support DHCP Default subnet mask 255.255.255.0 Communication data format Binary	IO-Link specification	V1.1
Transmission rate  4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM3)  Ethernet/IP  Number of communication interface 2 Transmission standard 100Base-TX  Auto-negotiation Supported Auto-MDI/MDIX Supported  Maximum transmission rate 100Mbit/s  Connector M12, D-coded, Female Default IP address segment 192.168.0.* IP address setting function Support DHCP Default subnet mask 255.255.255.0  Communication data format  4.8kbps(COM1) / 38.4kbps(COM2) / 230.4kbps(COM2)	Frame type	Supports all specified frame types
Ethernet/IP Number of communication interface 2 Transmission standard 100Base—TX Auto—negotiation Supported Auto—MDI/MDIX Supported Maximum transmission rate 100Mbit/s Connector M12, D—coded, Female Default IP address segment 192.168.0.* IP address setting function support DHCP Default subnet mask 255.255.255.0 Communication data format Binary	Support Device	Maximum 32Bytes Input / 32Bytes Output
Ethernet/IP  Number of communication interface 2  Transmission standard 100Base=TX  Auto-negotiation Supported  Auto-MDI/MDIX Supported  Maximum transmission rate 100Mbit/s  Connector M12, D-coded, Female  Default IP address segment 192.168.0.*  IP address setting function support DHCP  Default subnet mask 255.255.255.0  Communication data format Binary	Transmission rate	4.8kbps(COM1) / 38.4kbps(COM2) /
Number of communication interface 2  Transmission standard 100Base—TX  Auto—negotiation Supported  Auto—MDI/MDIX Supported  Maximum transmission rate 100Mbit/s  Connector M12, D—coded, Female  Default IP address segment 192.168.0.*  IP address setting function support DHCP  Default subnet mask 255.255.255.0  Communication data format Binary		230.4kbps(COM3)
Transmission standard  Auto-negotiation  Auto-MDI/MDIX  Supported  Maximum transmission rate  Connector  Default IP address segment  IP address setting function  Default subnet mask  Communication data format  100Base-TX  Supported  100Mbit/s  200Mbit/s  200Mbit/s	Ethernet/IP	
Auto-negotiation  Auto-MDI/MDIX  Supported  Maximum transmission rate  Connector  Default IP address segment  IP address setting function  Default subnet mask  Communication data format  Supported  100Mbit/s	Number of communication interface	2
Auto-MDI/MDIX  Maximum transmission rate  Connector  Default IP address segment  IP address setting function  Default subnet mask  Communication data format  Supported  100Mbit/s  1100Mbit/s  1100Mb	Transmission standard	100Base-TX
Maximum transmission rate  Connector  M12, D-coded, Female  Default IP address segment  IP address setting function  Default subnet mask  Communication data format  100Mbit/s  M12, D-coded, Female  192.168.0.*  192.168.0.*  Support DHCP  255.255.255.0  Binary	Auto-negotiation	Supported
Connector M12, D-coded, Female Default IP address segment 192.168.0.* IP address setting function support DHCP Default subnet mask 255.255.255.0 Communication data format Binary	Auto-MDI/MDIX	Supported
Default IP address segment 192.168.0.* IP address setting function support DHCP Default subnet mask 255.255.255.0 Communication data format Binary	Maximum transmission rate	100Mbit/s
IP address setting function support DHCP Default subnet mask 255.255.255.0 Communication data format Binary	Connector	M12, D-coded, Female
Default subnet mask 255.255.255.0 Communication data format Binary	Default IP address segment	192.168.0.*
Communication data format Binary	IP address setting function	support DHCP
· · · · · · · · · · · · · · · · · · ·	Default subnet mask	255.255.255.0
Operating temperature −20−55°C	Communication data format	Binary
	Operating temperature	–20–55℃

Note: Us is the module power supply, and UL is the load power supply Note: UL is not used inside the module, so it is unnecessary to connect it Ui to Uo is directly connected

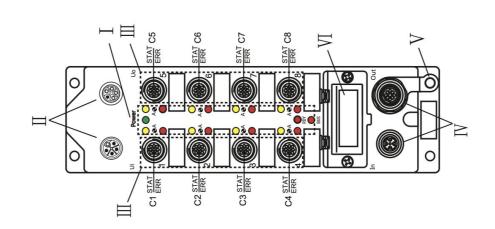

#### IO-Link Port Connector M12

#### **Bus Connector M12**

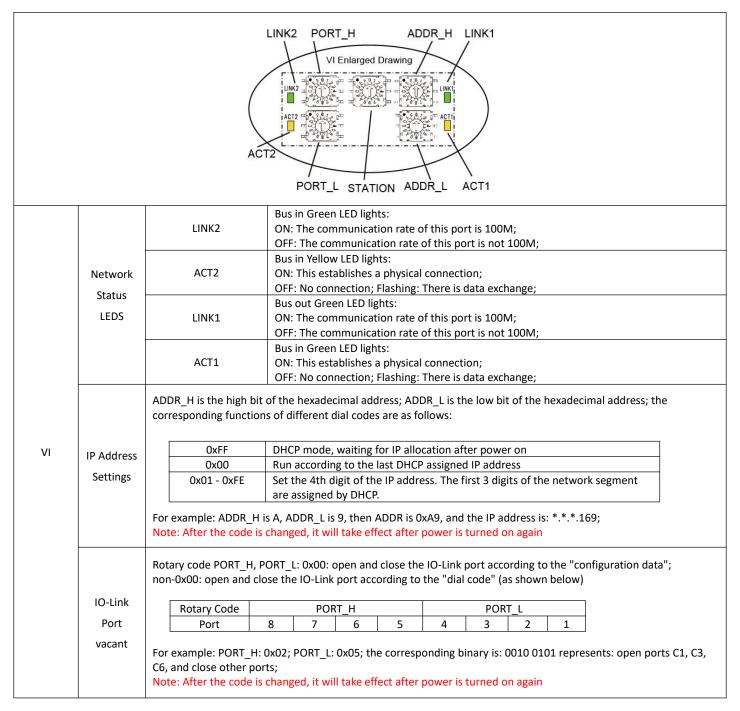

Area Code	Project	Description						
		LED name	Detail					
	Module	Power	Green LED lights: ON: The module power supply (U <sub>b</sub> ) OFF: The module power supply is disconnected					
		BUS	Green LED lights: ON: Ethernet/IP Communication is normal Red LED lights: ON: Ethernet/IP Communication interruption; Flashing: In DHCP mode, waiting for IP assignment					
I	LEDS	RDY	Red LED lights: ON: IO-Link There is an error in the port, which is inconsistent with the configuration;					
		STAT	Yellow LED lights: The IO-Link communication status of the port (C1-C8)  ON: The IO-Link communication is normal;  OFF: The IO-Link communication is not established;					
		ERR	Red LED lights: Working state of the port ON: The port is working abnormally; please check the IO-Link cable or the IO-Link port settings in the dial code OFF: There is no abnormality in this port; IO-Link is communicating normally or this port is closed or disabled during the dial switch.					
II	Power	1	nput, L-coded, 5-pin, male output, L-coded, 5-pin, female					
	Supply							
111	IO-Link PORT	For example: C1 STAT/ERR represents that the port is PORT1, The LED above the right of the port is STAT and the						
IV	BUS	In ( left ): Ethernet/IP Bus in, M12 D-Code, 5-pin, female Out (right): Ethernet/IP Bus out, M12 D-Code, 5-pin, female

#### IO-Link Port Byte Mapping

Data	Instance ID	Data length(Byte)
Configuration Data	151	4
Input Data	100	266
Output Data	150	256

1.IO-Link Configuration Data (Occupy 4 Byte)								
Byte	Description							
	8 bits represent the configuration of 8 ports IO-Link status: 0 off, 1 on							
Byte0	Bit 7 6 5 4 3 2 1 0							
	Port C8 C7 C6 C5 C4 C3 C2 C1							
Byte1	reserve							
Byte2	reserve							
Byte3	reserve							

2.IO-Link Process Da	ta Input (Occupy 266 Byte	e)									
Byte					Desc	ription					
	8 bits represent the current IO-Link status of 8 ports: 1 is normal communication, 0 is no communication										
Byte0		Bit	7	6	5	4	3	2	1	0	
		Port	C8	С7	C6	C5	C4	C3	C2	C1	
8 bits represent IO-Link disconnection records of 8 ports: 1 means disconnection, 0 means			ns no disconnection								
Byte1		Bit	7	6	5	4	3	2	1	0	
		Port	C8	C7	C6	C5	C4	С3	C2	C1	
Byte2				C1 Po	rt disco	nnectio	n time	s			
Byte3		C2 Port disconnection times									
Byte4		C3 Port disconnection times									
Byte5	C4 Port disconnection times										
Byte6	C5 Port disconnection times										
Byte7	C6 Port disconnection times										
Byte8	C7 Port disconnection times										
Byte9	C8 Port disconnection times										
Byte10-Byte41	C1 Port process input data (32Byte)										
Byte42-Byte73	C2 Port process input data (32Byte)										
Byte74-Byte105	C3 Port process input data (32Byte)										
Byte106-Byte137	C4 Port process input data (32Byte)										
Byte138-Byte169	C5 Port process input data (32Byte)										
Byte170-Byte201	C6 Port process input data (32Byte)										
Byte202-Byte233	C7 Port process input data (32Byte)										
Byte234-Byte265	C8 Port process input data (32Byte)										

3.IO-Link Process Data Output (Occupy 256 Byte)				
Byte	Description			
Byte0-Byte31	C1 Port process output data (32Byte)			
Byte32-Byte63	C2 Port process output data (32Byte)			
Byte64-Byte95	C3 Port process output data (32Byte)			
Byte96-Byte127	C4 Port process output data (32Byte)			
Byte128-Byte159	C5 Port process output data (32Byte)			
Byte160-Byte191	C6 Port process output data (32Byte)			
Byte192-Byte223	C7 Port process output data (32Byte)			
Byte224-Byte255	C8 Port process output data (32Byte)
